

Assignment –2

Introducing Relational Databases.

Name : Tejas Rajendra Patil

PRN: 250240520094

1) Which field of the Customers table is the primary key?

Ans:- Cnum is the primary key of the CUSTOMERS table. It uniquely identifies each customer.

```
mysql> desc customers;
```

Field	Type	Null	Key	Default	Extra
Cnum	int	NO	PRI	NULL	
Cname	varchar(10)	YES		NULL	
city	varchar(10)	YES		NULL	
rating	int	YES		NULL	
Snum	int	YES		NULL	

5 rows in set (0.04 sec)

2) What is the 4th column of the Customers table?

Ans:- The 4th column is Rating. It stores an integer value that indicates the customer's rating (e.g., 100, 200, 300).

```
mysql> select cname,rating,city from customers where city='San Jose';
```

cname	rating	city
Liu	200	San Jose
Cisneros	300	San Jose

2 rows in set (0.00 sec)

3) What is another word for row? For column?

Ans:- **Tuple** or **Record**

It represents a single entry in the table.

Column

Answer: **Attribute** or **Field**

It defines the type of data stored (like name, rating, etc.).

4) Why isn't it possible to see the first five rows of a table?

Ans:- tables are unordered by default—they behave like sets. So, unless you explicitly use an ORDER BY clause, there's no guaranteed order of rows, and the concept of "first five rows" doesn't technically exist.
